IgM

with anti-gamma

globulin activity.

```
Ig kappa chain V-III region (Sie) - human (tent: C;Species: Homo sapiens (man)
C;Date: 06-Jul-1982 #sequence_revision 06-Jul-19
C;Accession: A01892
R;Andrews, D.W.: Capra, J.D.
Biochemistry 20, 5816-5822, 1981
A;Title: Amino acid sequence of the variable real A;Reference number: A90450; MUID:82046598; PMID A;Accession: A01892
A;Molecule type: protein
A;Residues: 1-109 <AND>
C;Comment: This chain was isolated from an IgM variables: 1-109 <AND>
C;Cenetics:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a kappa chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyte antigen (CTLA) 4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a R1-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune classes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient disorders.

The antibody is directed cytotoxic T-lymphocyte antigen (CTLA)-4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FR1-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune disease, diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient disorders.
                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                               AAR38672;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diseases), and myasthenia gravis (an autoimmune muscular disease). IL-4 antagonists also find use as adjuvants to allergy immunotherapy and as vaccine adjuvants, especially when directing the immune response toward a THI response would be beneficial in treating or preventing the disease. The present sequence represents an anti-IL-4 receptor and anti-IL-13 receptor monoclonal antibody (MAb) 27A1 light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                    AAR38672 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human antibody (an interleukin (IL)-4 antagonist) (I) that binds human IL-4 receptor (IL-4R), and is cap inhibiting an IL-4-induced biological activity. (I) is also useful inhibiting both IL-4-induced biological activity and IL-13-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence :

                                                                                                                                                     The nucleotide sequence of F105 Vk (AAQ42707 - sequence differs other F105 Vk sequences given elsewhere in the specification) we compared with germline gene Humvk325 (AAQ42706), showing 97.7% similarity. By nucleotide sequence analysis, F105 appears to be derived from a member of the Vk III subgroup gene family.
                                                                                                                                   Sequence
                                                                                                                                                                                                                                              DNA segments encoding monoclonal antibody - and neutralises HIV, for treating AIDS, and monitoring HIV infection
                                                                                                                                                                                                                       Disclosure; Page 74-75; 109pp; English.

These can be used in diagnosis and therapy of HIV-1 infection.

(I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAH68615 to AAH68726 represent the nucleotide sequence which encode AAG93550 to AAG93670 to AAG93670 represent anti-Rh(D) heavy chain CDR3 amino acid sequences which are given in the exemplification

urticaria (especially chronic idiopathic urticaria), ulcers, gastric inflammation, mucosal inflammation, ulcerative colltis, Crohn's disease, inflammatory bowel disease, other disorders of the digestive system in which IL-4 plays a role (e.g. IL-4-induced inflammation of part of the gastrointestinal tract), conditions in which IL-4-induced barrier disruption plays a role (e.g. conditions in which IL-4-induced barrier disruption plays a role (e.g. conditions in which II-4-induced barrier the color in the lung or gastrointestinal tract), scleroderma, hypertrophic scarring, Whipple's disease, benign prostate hyperplasia, IL-4-induced pulmonary conditions, allergic reactions to medication, Kawasaki disease, sickle cell disease or crais, Churgstrauss syndrome, Grave's disease, pre-eclampsia, Sjogren's syndrome, autoimmune lymphoproliferative syndrome, autoimmune haemolytic anemia, nachronis
                                          diseases), and myasthenia gravis (an autoimmune muscular disease). IL-4 antagonists also find use as adjuvants to allergy immunotherapy and as vaccine adjuvants, especially when directing the immune response toward a THI response would be beneficial in treating or preventing the disease. The present sequence represents an anti-IL-4 receptor monoclonal antibody (MAb) 12B5 light chain variable region.
                                                                                                                                                                                                     Barrett's esophagus, autoimmune uveitis, tuberculosis, nephrosis, pemphigus vulgaris or bullous pemphigoid (autoimmune blistering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               biological activity in vivo in a human, and for treating septic arthritis in a human afflicted with septic arthritis. (I) is also used for treating conditions such as septic/reactive arthritis, dermatitis herpetiformis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antagonist) (I) that binds human IL-4 receptor (IL-4R), and is cap inhibiting an IL-4-induced biological activity. (I) is also useful inhibiting both IL-4-induced biological activity and IL-13-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human antibody which binds human interleukin (IL)-4 receptor and is capable of inhibiting IL-4 induced biological activity, functions a IL-4 antagonist and is useful for treating septic arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention

Cf me polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to craise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet CC Polypeptides of the invention may also be useful in treating platelet CC ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, and allender's, parkinson's and funtington's diseases, amylotrophic lateral and contraceptive tracks immune deficiencies resulting barety and catteral and contraceptive tracks immune deficiencies resulting to be accepted to the province tracks and funtington's diseases, amylotrophic lateral and contraceptive tracks immune deficiencies resulting to the province tracks immune tracks immune tracks immune tracks and the province tracks immune tracks immune tracks and the province tracks immune tracks and the province

The invention relates to polynucleotides encoding novel human CC proteins or their active domains. The polypeptides, polynucleotides and CC antibodies raised against the polypeptides are used in a method of CC treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as CC molecular weight markers, food supplements, and in antibody production. CC The polypeptides are used to identify compounds which bind to the CC production of recombinant proteins, and in generating anti-sense DNA or CC production of recombinant proteins, and in generating anti-sense DNA or CC RNA and in gene therapy. Polypeptides of the invention can be used to craige antibodies/elicit an immune response, to determine quantitative CC protein levels, as tissue markers, and to isolate receptors or ligands. CC polypeptides of the invention may also be useful in treating platelet CC disorders, stem cell disorders, regenerating bone, cartilage, tendon, CC ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating one portation and survival of stem cells, as a contraceptive, treating one portation and survival of stem cells, as a contraceptive, treating one portation and survival of stem cells, as a contraceptive, treating and barrant and osteoarthritis, anaemia. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  02-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral;
antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic;
thrombolytic; immunogen; antibody; gene therapy; neurological disorder;
